PHARMACY AND POISONS BOARD

GUIDANCE ON FUMIGATION OF PHARMACEUTICAL PREMISES

July 2020

FUMIGATION OF PHARMACEUTICAL PREMISES

The Pharmacy and Poisons Board has positioned itself at the Core of the fight against Covid-19 in Kenya by Public education and sensitization on the Covid-19 prevention and control measures through empowerment of wholesalers of medicines and Community pharmacies/Chemists as they are the first point of contact with most patients seeking medical advice.

Among the Covid-19 prevention measures include fumigation of the pharmaceutical premises from time to time.

Towards this end, the Pharmacy and Poisons board wishes to advice that among the recommended methods of decontamination is fogging of the premises with hydrogen peroxide.
